FUND DESCRIPTION

The Johnson Opportunity Fund is a domestic equity portfolio that seeks to consistently outperform the Russell 2500 Index over a full market cycle. The team's quality-focused investment discipline intends to reduce volatility and provide downside protection in turbulent markets. Johnson utilizes a disciplined portfolio construction framework relying on fundamental bottom-up research aided by a proprietary quantitative assessment.

FUND HIGHLIGHTS

- Primarily market cap ranges from \$400 million to \$15 billion
- Diversified portfolio of 70-90 securities
- Historically lower volatility than the Russell 2500

INVESTMENT STRATEGY

The Johnson Opportunity Fund relies on a disciplined, multi-step process designed to manage risk and generate alpha. This process combines fundamental, bottom-up research with proprietary quantitative analysis and team discussion to identify high-quality companies that exhibit a favorable combination of valuation and momentum characteristics.

QUANTITATIVE RESEARCH

- Sector-specific score based on quality, valuation, and momentum (QVM) factors
- Quality Factor Test to identify risk management concerns and guide the fundamental research process
- Output used to screen SMID cap universe and as a continuous risk management tool

FUNDAMENTAL RESEARCH

- Sector-specific analysts perform bottom-up research on industries and companies
- Detailed modeling, analysis, and evaluation to determine high-quality companies at attractive valuations
- Analyst recommendation to strategy team

PORTFOLIO CONSTRUCTION

- Team discussion and debate of analyst recommendations
- Final investment decision made by Portfolio Manager
- Fundamental maintenance research conducted by sector analysts
- Continuous evaluation of risk management factors aided by quantitative analysis

INVESTMENT PHILOSOPHY

The Fund's portfolio management team's philosophy focuses on quality companies over a complete market cycle. Historical evidence supports their belief that high-quality companies outperform over the long run with reduced volatility and greater downside protection in turbulent markets. The Fund's advisor seeks to improve investment results by considering both valuation and momentum. Combining valuation and momentum factors within their quality focused approach has historically resulted in greater returns, and superior risk-adjusted results over time. Finally, pairing fundamental research with their proprietary quantitative assessment leads to a stronger investment discipline for the Fund and results in a more disciplined investment process, and should lead to greater risk management and more consistent performance over time.

Table Source: Model holdings are subject to change. There is no assurance that any of the securities shown still remain in the portfolio at the time you received this fact sheet. Actual holdings and percentage allocation in individual client portfolios may vary and are subject to change. The Top Ten Holdings, as well as the other data presented, are as of the period indicated, and should not be considered a recommendation to purchase, hold, or sell any particular security. It should not be assumed that any of the Top Ten Holdings were or will be profitable going forward.

The data represented herein reflects past performance and is not a guarantee of future results. The return and principal value of your investment will fluctuate and be more or less than their original cost at the time of redemption. For more information, please carefully read the most recent prospectus dated May 1, 2023. To obtain a prospectus for the Fund, please contact Johnson Mutual Funds at 513-661-3100 or 800-541-0170.

Shares in the Fund may fluctuate, sometimes significantly, based on market conditions and other factors. As with any mutual fund investment, the Fund's returns may vary and you could lose money. The Fund value might decrease in response to the activities and financial prospects of an individual company. The Fund may incur greater transaction costs and realized capital gains as a result of higher turnover of securities. Common stocks tend to be more volatile than other investment choices. The Adviser's judgments about the attractiveness, value and potential appreciation of particular securities in which the Fund invests may prove to be incorrect and there is no guarantee that the Adviser's judgment or quantitative model will produce the desired results. In addition, the stocks of small sized and medium sized companies are subject to certain risks including: Possible dependence on a limited product line, limited financial resources or a limited management group. Less frequent trading and trading with smaller volume than larger stocks, which may make it difficult for the Fund to buy or sell the stocks. Greater fluctuation in value than larger, more established company stocks.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-ended funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.
